KRISH SAXENA

Monroe Township, NJ | krishsaxx@gmail.com | (609) 598-1193 | US Citizen

EDUCATION

Worcester Polytechnic Institute — Worcester, MA
B.S. in Robotics Engineering (Expected 2028) · 3.8 GPA · Dean's List
Relevant Coursework: Intro to Robotics Engineering, Computer-Aided Design, Object-Oriented Design Concepts, Ordinary Differential Equations, Embedded Systems, Calculus III & IV, Mechanical Applications for Robotics.

Princeton Day School — Princeton, NJ
High School Diploma, Graduated 2025 · 3.8 GPA

TECHNICAL SKILLS

Programming: Python, MATLAB, Java, C++

Engineering Tools: SolidWorks, KiCad, Arduino

Data & Analytics: Sensor signal processing, data pattern analysis, market research

TECHNICAL EXPERIENCE

Data Analysis & Research Intern — Optimal Strategix Group (OSG Analytics), *Princeton, NJ*
June 2026 – August 2026

- Analyzed consumer survey datasets, analyzing packaging perception and market sizing for class action lawsuit deposition purposes (e.g., Delgado vs. Meta, Palmer vs. The Coca-Cola Company)
- Formulated a comprehensive business plan for a Robotics-as-a-Service (RaaS) service, analyzed scalability issues among robotics startups, and created a subscription pricing model.
- Analyzed surveys to improve consumer data collection for company reports, systematically identifying error sources and consumer behavioral biases within Meta dataset distributions to improve report quality.

Research Intern — Imaging & Sensing Lab, Temple University, *Philadelphia, PA*
June 2024 - August 2024

- Researched object detection systems by mixing outputs of RADAR and LIDAR sensors to produce high-accuracy detection in various weather conditions.
- Developed advanced signal processing algorithms in Python and MATLAB, using concepts including beamforming and noise reduction.
- Scaled object detection algorithms to handle higher-density point clouds, expanding processing throughput from 300,000 to 600,000 points/second by combining sensor returns.

LEADERSHIP & EXTRACURRICULAR

Team Leader — VEX Robotics Club, Princeton, NJ
2022–2025

- Managed a 30-member robotics team, placing 6th in the regional competition.
- Led robot design and assembly, contributed to match planning to maximize performance in competition.

PROJECTS

Autonomous Fruit-Harvesting & Sorting Robot – WPI | March 2026 - May 2026

- Developed a sensing algorithm in Python using computer vision to identify, approach, harvest, and sort target fruit from a simulated orchard environment.
- Implemented an adaptive AprilTag detection script that automatically searches and approaches the correct basket based on the species of fruit collected.
- Designed and assembled a rack-and-pinion claw system in CAD to achieve precise object handling and movement
- Integrated Python control scripts and hardware systems like the robot’s drivetrain, grabbers, and sensors.
